

KennelPro Software

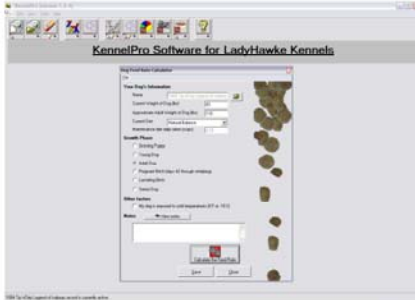

KennelPro software was designed to assist the hobby breeder and large breeding kennel alike.

KennelPro provides a rich set of tools and a robust database that make storing, retrieving, and analyzing data easy and fun.

With KennelPro you can store pedigrees and use our Pedigree smart-fill tool to reduce the amount of retyping necessary with line-bred dogs.

You can also calculate in-breeding co-efficient and numerous other values to help you better plan your breeding program.

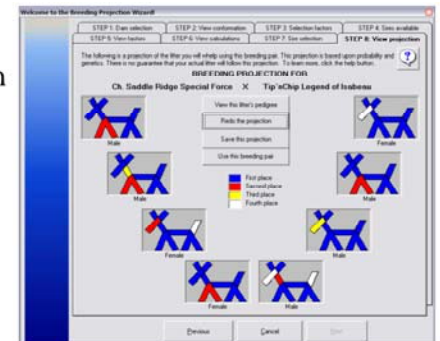

Enter conformation evaluations to assess the quality of dogs in your breeding program.

Manage the nutrition of feed rations your dogs using the feed calculator tool!

Use all the information you have stored within KennelPro's unique Breeding Projection Wizard!

The Breeding Projection Wizard will help you choose a sire for your dam and even predict a virtual litter.

Create HTML reports to share with others in just a few simple steps.

Download a free copy today from LadyHawke Kennels website, <http://www.sdk-weber.com>

KennelPro works on Windows XP computers with a minimum of 256MB RAM.
